\*The performance data is based on a 12-foot aluminum boat with one person and one Spirit battery in calm lake water. The actual speed, range and running time may vary because of different boats, load, weather, etc.

#### Hydrogeneration

The Hydrogeneration is operational between 3 knots to 10 knots. Over 10 knots, Spirit 1.0 Evo will enter protection mode and the recharging power will not go up.

\*The Hydrogeneration data is based on real tests with the anti-ventilation plate installed.
